

Career Evolutions is searching for a **Sr. Cloud DevOps Engineer** for a Global Risk Management organization in Phoenix, AZ. Full-time, Direct-Hire opportunity up to **\$180K/Annual**.

As a Cloud Engineer you will be responsible for the implementation and maintenance of the innovative technologies to support CI/CD pipeline and container technologies. You will build and deploy cloud services in virtualized IaaS and PaaS operating environments. You will design, create and architect standards and methods for distributed systems.

If you're ready to implement your passionate understanding of cloud technologies into an exciting and engaging environment; if you're a team player who enjoys being a part of a team working with new and groundbreaking technologies; and if you feel a need to take ownership of the work that you do and see your success translate to direct company growth – then this is the position for you!

Responsibilities:

- Deploy and support Kubernetes and Container Technologies
- Engineer and implement new cloud technology solutions, primarily focused on public cloud.
- Obtain and maintain an in-depth understanding of AWS, Google, and Azure public cloud technology to ensure all appropriate options are considered to support business initiatives
- Subject Matter Expert for Leadership, Project Managers, Software and Engineering teams, to navigate the constantly changing technology landscape and identify appropriate tactical and strategic solutions
- Write code working hand in hand with Software Engineering teams on understanding ways to improve IaaS and PaaS services
- Be an advocate for our customers in representing their issues to Leadership and develop innovative ways to resolve issues

Requirements

- Associate's degree in Information Technology or equivalent experience
- 5+ years' experience with Cloud, Storage, Container and CI Technologies
- Advanced knowledge with AWS public cloud development and architecture
- AWS DevOps Certification (**Huge Plus**)
- Programming skills in Python, Cloudformation, Chef and Javascript (**Required**)
- Experience with web-based applications and/or web services-based applications
- Experience with the implementation and/or operations of medium to large-scale enterprise cloud infrastructures
- Experience with SOAP and REST APIs
- Advanced knowledge of Amazon Web Services (AWS), including but not limited to core IaaS (IAM, VPC, EC2, S3, EBS, ELB) and native AWS Services (Lambda, AWS Config, EMR, Athena)
- Great understanding of data security and privacy concerns
